

Collection Records of the Project "Mosquitoes of Middle America"

11. Venezuela (VZ); Guianas: French Guiana (FG, FGC), Guyana (GUY), Surinam (SUR)¹Sandra J. Heinemann and John N. Belkin²

For general information and collections from the Dominican Republic (RDO) the first publication of this series should be consulted (Belkin and Heinemann 1973). Any departure from the method in this publication is indicated below. Publications 2-6 of the series (Belkin and Heinemann 1975a, 1975b, 1976a, 1976b, 1976c) recorded data on collections from the remainder of the West Indies except Jamaica (Belkin, Heinemann and Page 1970:255-304) and the islands adjacent to Venezuela as well as Trinidad and Tobago (to be covered later).

Publication 7 on collections from Costa Rica (Heinemann and Belkin 1977a) began treatment of Central America and publication 8 covered the rest of nuclear Central America (Heinemann and Belkin 1977b). Publication 9 was devoted to Mexico (Heinemann and Belkin 1977c), publication 10 dealt with the extensive collections in Panama (including Canal Zone) (Heinemann and Belkin 1978) and the present publication begins coverage of South America.

The collections in Venezuela and the Guianas could not have been made without the interest and assistance of cooperators of the project. We are greatly indebted to these individuals and their organizations for the facilities, transportation and assistance as well as the donation of collections to the project.

In Venezuela we are indebted to Arnoldo Gabaldon, Lacerio Guerrero, Pablo Cova Garcia and Juan Pulido, all of Direccion de Malariologia y Saneamiento Ambiental, Ministerio de Sanidad y Asistencia Social; G. H. Bergold and Octavio M. Suarez, Departamento de Virologia, Instituto Venezolano de Investigaciones Cientificas (IVIC); and Felipe J. Martin, Departamento de Zoologia Agricola, Facultad de Agronomia, Universidad Central de Venezuela, Maracay. We were provided facilities at Rancho Grande as well as transportation and assistance in the field and laboratory.

In French Guiana we were provided with laboratory facilities, transportation and assistance by Institut Pasteur de la Guyane Francaise for which we are indebted to Charles Serie, Pierre Fauran and Rene Kramer. Additional collections were made for the project by cooperators T.H.G. Aitken and Ambrose Guerra, then of Trinidad Regional Virus Laboratory. We are most fortunate that Jean Clastrier, now at Museum d'Histoire Naturelle, Paris, France, made available to the project a portion of his extensive and important collection of mosquitoes from French Guiana (FGC).

In Guyana George Giglioli, Mosquito Control Laboratory, Ministry of Health, provided laboratory facilities, transportation and assistance.

In Surinam we were fortunate in obtaining the cooperation of Edwin van der Kuyp, Bureau voor Openbare Gezondheidszorg, and Hans A. M. de Kruijf, Centraal Laboratorium, in providing facilities, transportation and assistance. D. C. Geijskes, Stichting Surinaams Museum, made available to the project collections made in 1952-1964.

As noted in Collection Records 7 (Heinemann and Belkin 1977a) various errors in previous publications of the project have been rectified in the present publication; also, most of the identifications are preliminary identifications only and in no way constitute a change in taxonomic status.

VENEZUELA

Code: VZ

The principal collections from Venezuela available to the project are identified by one of the following four printed labels: //VZ[handwritten 1-52]/Venezuela 65-66/Mosq Mid Amer//, //VZ[handwritten 53-131]/Venezuela 67-68/Mosq Mid Amer//, //VZ[handwritten 132-418]/Venezuela 69-70/Mosq Mid Amer//, //VZ[handwritten 419-433]/Venezuela 7[handwritten 3]/Mosq Mid Amer//.

¹Contribution from project "Mosquitoes of Middle America" supported by U.S. Public Health Service Research Grant AI-04379 and U.S. Army Medical Research and Development Command Research Contract DA-49-193-MD-2478.

²Department of Biology, University of California, Los Angeles, CA 90024.

In addition to the collections made specifically for the project we had access to material (VZ 419-433) collected by members of the Arbovirus Ecology Unit, Center for Disease Control (CDC), W. Daniel Sudia, chief, to whom we are greatly indebted. Miscellaneous material in the collections of W.H.W. Komp (VZK) and L. E. Rozeboom (VZR) is not recorded at this time but will be covered after completion of publication of the principal collection records of the project.

VZ Localities

The following maps were used to determine localities, elevations and grid coordinates: Venezuela 1:50,000, series E785, sheets 6547-1, -2, 6647-1, -2, -3, 6747-2, -3, 6847-3, -4, eds. 1-AMS, 2-AMS; World 1:250,000, series 1501, sheet NC 19-8, ed. 1; World 1:1,000,000, series 1301, sheet NC 19, ed. 1-AMS; Venezuela 1:1,680,000, Creole road map (with 1:597,000 inset of N Central Venezuela); Venezuela, Texaco road map (with large scale insets of major cities). The U. S. Board on Geographic Names gazetteer for Venezuela, 1961, was used for the spelling or plotting of some localities. Beebe and Crane (1947) was used for elevations and ecological information of some localities. In most cases elevations are only approximate, especially for collections made in mountainous areas where the error may be 100-300 m.

GUIANAS

In addition to the collections from the various countries in the Guianas treated in the present publication, the project had access to miscellaneous collections which were coded as follows: FGA—French Guiana, E. Abonnenc; FGK—French Guiana, W.H.W. Komp; GUYK—Guyana, W.H.W. Komp; and BGR—Guyana, L. E. Rozeboom. These collections will be treated at a later date after completion of publication of the principal collection records of the project.

FRENCH GUIANA

Codes: FG, FGC

The principal collections from French Guiana available to the project are under 2 separate codes: FG, made expressly for the project in 1965 and 1967; and FGC, made by J. Clastrier and associates in 1967-1969 and donated to the project. The 2 codes are treated separately to retain the differences in numbering.

The following maps were used to find collecting sites and determine elevations: World 1:1,000,000, series 1301, sheet NB 22, ed. 1-AMS; Guyane Francaise 1:500,000, feuille nord, sud, Institut Geographique National, Paris, 1950; Guyane Francaise 1:50,000, feuille NB 22-II 4C, Institut Geographique National, Paris, 1946; Ile de Cayenne 1:20,000, Institut Geographique National, Paris, 1954. The U. S. Board on Geographic Names gazetteer for French Guiana, 1974, was used for the spelling of place names and determining the latitude and longitude of localities. The Universal Transverse Mercator Grid coordinates are not given because of the lack of appropriate maps. Elevations are accurate to within about 10m.

Code: FGC

The FGC collections consists of part of the material collected, reared and mounted by Jean Clastrier (and associates) in French Guiana in 1967-69. The specimens and data were given to the Mosquitoes of Middle America project by J. Clastrier in March 1972. The FGC code was assigned by us, but the lot and subplot numbers are Clastrier's. The numbering system is different from that used by our project and is as follows: (1) There are 2 sets of lot numbers: one from 70 to 512 (adult collections), and another from 3112 to 4042 (adult and larval collections). Most lots have a 4-digit lot number only, some have a 2- or 3-digit lot number only, and some have both a 4-digit and a 2- or 3-digit lot number. In cases where a lot has 2 separate lot numbers, the collection data and identifications are given under the 4-digit lot number,

but the 2- or 3-digit lot number is cross-referenced, and is also listed in the locality and species indices. (2) Males and their associated genitalia have subplot numbers from 1 to 300 (or A, B, C, etc.). (3) Adults and their associated skins have subplot numbers from 1 to 300 (or A, B, C, etc.).

Identifications in [brackets] indicates identifications taken from Clastrier's publications (Clastrier 1968, 1970a, 1970b, 1970c, 1971, 1972, 1973, 1974), where we have not been able to confirm those identifications.

Localities are given, in most cases, as originally written by J. Clastrier (for example: "foret de Cabassou" or "Matoury C"). The locations of these collection sites are given in the Locality Index.

The collections from French Guiana under code FGC are identified by the following printed label: //FGC[handwritten 70-4042]/Fr. Guiana 67-69/J. Clastrier//.

GUYANA
Code: GUY

The principal collections from Guyana available to the project are identified by the following printed label: //GUY[handwritten 1-74]/Guyana 67-68[or handwritten 61 or 66]/Mosq Mid Amer//. Collections 1-12 and 13-20 were sent to us by M.E.C. Giglioli, who presumably received them from his father, George Giglioli, in Guyana, but the collector is unknown and other data are incomplete.

The following maps were used to find localities and elevations: World 1:1,000,000, series 1301, sheet NB 21, ed. 1-AMS; British Guiana 1:500,000, series E491, sheet NE, ed. 3-GSGS; British Guiana 1:100,000, series E691, sheets 16, 23, 24, ed. AMS 2. The U. S. Board on Geographic Names gazetteer for Guyana, 1976, was used for the latitude and longitude of localities, and spelling of place names. Unfortunately, these maps are so outdated, and the gazetteer is so incomplete that no attempt was made to determine the Universal Transverse Mercator Grid coordinates. Also, the elevations may be in error by several tens of meters.

SURINAM

Code: SUR

The collections from Surinam available to the project are identified by one of the two following printed labels: //SUR[handwritten 1-117]/Surinam 65-66[modified with handwritten 42, 52, 54, 57, 59, 61, 63 or 64]/Mosq Mid Amer// or //SUR[handwritten 200-259]/Surinam 67-68/Mosq Mid Amer//.

The following maps were used to find collecting sites and determine elevations: World 1:1,000,000, series 1301, sheets NA 21, NB 21, ed. 1-AMS; Paramaribo 1:10,000 and Paramaribo en Omgeving 1:500,000, Paramaribo, Suriname. The U. S. Board on Geographic Names gazetteer for Surinam, 1974, was used for the spelling of place names and determining the latitude and longitude of localities. The Universal Transverse Mercator Grid coordinates are not given because of the lack of appropriate maps. Elevations are only approximate and may be in error by several tens of meters.
